Keynote address...

Dr. S. B. Deosarkar, delivering his expert talk on the topic: "**Global Perspective towards Skilling and Futuristic Workforce Development**".

In this aspect, the Sustainable Future Economy is focused by giving example of Care economy & Blue economy. It has been came to highlight that in developed countries, the ratio of working robots is 106 behind every 10,000 employees while in India only 4 to 5 working robots. It's worth appreciable that in India around 8 to 10 Lac students prefer to go for higher education.

In Maharashtra highly educated candidates contributes around 15% in GDP. In current scenario, European countries has business of \$40,000 per year in the technical areas like Artificial Intelligence, Data Science and Machine Learning; while our country has business of \$2000 per year in this emerging areas.

To speak on Green economy; the environment, carbon emission and global warming issues has much affected Indian agriculture and farming. From overall \$ 2.6 Trillion economy of India, only 0.6% are spent on research activities and 4% on primary education. This is think because it's contradictory compare to other developed countries. This lacuna should be filled up with very deterministic policies and its really countable that Indian education sector is now improving in that direction. To talk on India's Engineering education, the iconic industrialists should morally come forward and initiate the digitalization of Engineering education. The conventional classroom system seems fall back now due to fast improvements in teaching and learning skills and today's high caliber and high grasping Indian youth. We need to strongly expose the Industry-Institute interaction. Also a need to integrate this with learning of Redesigning to improve the talent quality. We need to improve communication with various related learning groups of our interest. Moreover, the gaming concept should be developed through digital skilling. PPP model can prove to be very much effective in public and private partnership in cultivating liberalization, limited freedom with ethics and globalization to move towards impactful and innovative engineering education in India.

Finally Prof. Vijay D. Chaudhari, the Co-convener – ICRAEST-2021 has concluded with vote of thanks to eminent speaker and participants along with all ICRAEST-2021 committee members who has dedicated their skill for the grand success of the conference.

Multitasking Human Body Measurement

Meenakshi Amit Chaudhari¹

Abstract - In my major project we can measure heart rate, pulse rate, blood pressure and body temperature. Heart rate reading will be displayed on LED by measuring the time between the two signal peak values and after that calculating the frequency of beats per minutes. Now a days we frequently visit to the doctor to get their vital signs measured. There is number of tools for non-invasive methods of measurement of these vital signs. The main objective of this proposed project is that to design and implement a reliable, low powered, cheap, non-intrusive, and accurate system that can be used on a regular basis and monitors the vital signs and displays the output to the LCD. This data will easily be obtained by this instrument which is wireless network. This project specifically deals with the data collection and signal conditioning of three vital signs: heart rate, blood pressure, and body temperature. Heart rate is measured through an Electrocardiogram that can be obtained by attaching skin surface electrodes on the patient's wrists and fingers. Blood pressure combines the methodologies of Electrocardiography and Photo plethysmography to continuously monitor the systolic and diastolic blood pressure. Body temperature is measured inside the arms with a thermistor.

Keywords- Heart sensor, LM35, Blood pressure sensor (NPP301A), LCD, Microcontroller PIC16F877A

Abstract- Now-a-days the amount of power consumed by lighting and streets shares a major energy demand. The Street light Automation system helps in reducing the energy consumption. Generally, street lights are switched on for whole night and during the day, they are switched off. But during the night time, street lights are not necessary if there is no traffic. Saving of this energy is very important factor these days as energy resources are getting reduced day by day. To overcome from this problem, a proper energy saving methods and lighting control to be implemented. The proposed work is to have two controls like, one is to switch OFF/Dim lights during no vehicle moments in streets and automatically switch it ON when vehicles arrive and the other modes are to give less intensity light for pedestrian and to switch on bright mode during vehicle moments at sides on the roads. In this work the LED lights are used for street arrangement, LDR is used as decide day night time and IR sensor used vehicle movement. It automatically switches the lights ON when the sunlight goes below the visible region of our eyes. This is done by a sensor called Light Dependent Resistor (LDR) which senses the light actually like our eyes. It automatically switches OFF/Dim lights whenever the sunlight comes visible to the sensor. The control signals of sensors have been fed to Arduino Nano board (ATMEGA328). In the Arduino Nano board the control logic is implemented to control lights based on vehicles and pedestrian moments with bright and dim mode of operation and to switch DIM lights during no vehicles.

Keywords - Light Dependent Resistor (LDR), Arduino ATMEGA328, Street Light Automation, RTC

8 Cost structure

In this block, you identify all the costs associated with operating your business model.

You'll need to focus on evaluating the cost of creating and delivering your value propositions, creating revenue streams, and maintaining customer relationships. And this will be easier to do so once you have defined your key resources, activities, and partners.

Businesses can either be **cost-driven** (focuses on minimizing costs whenever possible) and **value-driven** (focuses on providing maximum value to the customer).

गोदावरी अभियांत्रिकी महाविद्यालयामध्ये सायबर सिक्युरिटी या विषयावर मार्गदर्शन

जळगाव : डिजिटल शिक्षणाच्या युगात विद्यार्थ्यांना सायबर फसवणुकीची जाणीव करून देत तांत्रिक ज्ञान देणे अत्यंत गरजेचे झाले असून गोदावरी अभियांत्रिकी महाविद्यालयात पोलीस रायडिंग डे च्या निमित्ताने दि. ३ जाने २०२३ रोजी सायबर सिक्युरिटी या विषयावर कार्यक्रम आयोजित करण्यात आला.

या कार्यक्रमाला प्रमुख मार्गदर्शक श्री दिलीप चिंचोले (हेड कॉन्स्टेबल), स्वाती पाटील (हेड कॉन्स्टेबल), प्रवीण वाघ (हेड कॉन्स्टेबल) हे उपस्थित होते. त्यांच्यासोबत महाविद्यालयाचे प्राचार्य डॉ. विजयकुमार पाटील, प्रा. हेमंत इंगळे (अधिष्ठाता), सर्व विभाग प्रमुख आणि विद्यार्थी उपस्थित होते.

कार्यक्रमाच्या सुरुवातीला मान्यवरांचे पुष्पगुच्छ देऊन स्वागत करण्यात आले. मार्गदर्शनामध्ये त्यांनी वेबसाईट तपासणी, फायनान्शियल फ्रॉड, नोकरी बद्दल होणारी फसवणूक तसेच विविध

ऑनलाइन शॉपिंगच्या माध्यमातून झिलपकार्ट व अॅमिझॉनची खरी वेबसाईट कशी ओळखाची याबद्दल माहिती दिली. आज-काल आपला डाटा हा वेगवेगळ्या माध्यमातून विकला जातो, त्यामुळे विविध ठिकाणाहून आपल्याला कॉल्स तसेच मेसेजेस येत असतात.

तसेच काही बिना आवश्यक अॅप्स आपल्या मार्फत इन्स्टॉल केले जातात, अशा प्रकारच्या चुकांमुळे आपली प्रायव्हॅसी ही धोक्यात येते. त्यामुळे

याबद्दल आपण जागरूक राहणे गरजेचे आहे.

तसेच त्यांनी सायबर सिक्युरिटी मधील करिअर वर प्रकाश टाकला. सायबर सिक्युरिटी मध्ये विद्यार्थ्यांसाठी वेगवेगळ्या संस्थांमध्ये अभ्यासक्रम शिकविला जातो त्या माध्यमातून विद्यार्थ्यांना करिअर करण्याची संधी असते. सायबर सिक्युरिटी ही एक प्रकारची सुरक्षा असते जी इंटरनेट सोबत जोडलेल्या सिस्टीम साठी एक प्रकारची सिक्युरिटी असते

त्यामुळे कोणत्याही प्रकारे आपला डाटा चोरी होऊ शकत नाही. सायबर क्राईम गुन्हांबद्दल ग्रामीण भागामध्ये लोकांना जागरूकता कमी आहे, त्यामुळे तरुण वगैरे पुढाकार घेऊन वेळोवेळी अवेअरनेस प्रोग्राम घेण्याची गरज आहे. त्या माध्यमातून त्यांनी युवकांना हे कार्य करण्यासाठी आवाहन केले. कार्यक्रमाच्या शेवटी विद्यार्थ्यांनी सायबर सिक्युरिटी संदर्भात प्रश्न विचारली, त्यांचे शंकर निरसन मान्यवरांनी केले.

कार्यक्रमाला विद्यार्थ्यांचा उत्स्फूर्त प्रतिसाद लाभला. कार्यक्रमाचे सुत्रसंचालन व आभार प्रदर्शन प्रा. दिपाली पाटील यांनी केले. इंटरनेट सुरक्षेबाबत आज सातत्याने बोलत जात पण तरीही तरुणांमध्ये त्याबाबत अद्याप जागरूकता नसल्याचे समोर आले आहे. देशात सायबर गुन्हांमध्ये वाढ होत आहे हे माहिती असूनही त्याबद्दल पुरेशी काळजी घेण्यास तरुण इच्छुक नसतात. त्या अनुषंगाने

Date- 02-05-2023 to 07-05-2023

Introduction:

Every nation currently makes extensive use of the Internet of Things (IoT). Governments, academia, and industry are all taking part in IoT research, business, and implementation in different ways. From the consumer to the military, IoT encompasses a variety of commercial and industries. Agriculture, spaceflight, healthcare, manufacturing, construction, water, and mining are among the sectors that are currently updating their legacy infrastructure to include IoT. A variety of IoT solutions are being developed as a result of the viability of ubiquitous connectivity, storage, and computation. IoT-based systems are increasingly being employed in emergency alerts, remote health monitoring, cutting-edge retail systems, infrastructure management in urban and rural areas, and transportation. Therefore, it is essential to comprehend the fundamentals of this novel technology.

Objectives:

- The objective of this FDP is to explore the current industry trends in IoT, which encompass a broad variety of skills that are essential to daily business, day-to-day life, and the workplace.

IOE(Internet of Everything)

- Internet of Everything is actually the superset of Internet of Things, meaning the technical characteristics belonging to IOE are also present in IoT but not vice-versa. It is a broader concept, definition strategically being initiated by Cisco. It basically contains four main types of elements that could connect with any other:
 - **Things** comprise of those devices, sensors, actuators, etc. that tend to either generate data or receive it from other sources, such as smart thermostats and other similar **gadgets**.
 - **People** are the end nodes who exchange or share information through social networking sites, health and fitness sensors, and so on.
 - **Data** is in its raw form which is analyzed and processed into meaningful information so that intelligent decisions could be made and other mechanisms could be controlled. For instance, average number of high-temperature hours each day could be calculated based on the inputs of temperature logs.
 - **Processes** are there to connect the things, people and data in order to put more value. For instance, using social networks and smart fitness devices in order to advertise relevant healthcare offerings to potential customers.

Brief summary:

In this session, the speaker has explained about role of IoT in forensics. He also elaborated the challenges and various techniques to overcome them while applying IoT in Forensics.

Screenshot of Google Meet Session

The screenshot shows a Google Meet session in progress. The main window displays a presentation slide titled "Traditional Forensics Investigation". The slide content is as follows:

Traditional Forensics Investigation

Traditional forensics investigation is a relatively mature field having formal standardisation of key processes to carry out investigation. The data acquisition in traditional forensics deals with sources such as hard drives, RAM, system logs or any peripheral storage [36] and for deeper investigation, the examiner can use techniques such as file carving in unallocated space. The traditional forensics also includes the detection of malicious network activities where the network traffics are collected and examined. In addition, currently, most crimes include mobile phone investigation which has its own challenges such as preserving the evidence in a volatile environment or bypassing the passcode and encryption. After the data acquisition, the collected artefacts are analysed from a technical and legal perspective, and presented as evidence supporting a crime during the court proceedings.

In simple words, it can be said that the traditional forensics is a subarea of forensics investigation in IoT because the latter consists of examining more variety of digital devices which are intercommunicating and data syncing among each other as well as the cloud servers. One of the major complexities in this situation is maintaining the chain and custody and legal requirements.

Participants in the meeting include Ritesh Kumar (presenting), Smitha Khajekar, Vaishali Dabholkar, Arun Kedar, Dr. Neeta Nemade, AMANATALI PATH..., MOHAN DAS SARI, VARSHA NAGPUR..., Nivedita Chavan, Dr. Sushma Chode, 53 others, and You.

Challenges and Techniques

- **Diversity of IoT environment:**
The IoT environment is comprised of devices ranging from low-end sensors to smart devices each serving their own purpose. The computing power, battery life, heterogeneity of operation systems, use of network protocols, and storage capacity in each of these devices vary from device to device. Performing forensic investigations on such devices can be challenging as the technology is constantly changing and updating, therefore existing tools and software are not adequate to extract data or evidence from a wide variety of devices that are being produced.
- **Complexity of IoT architecture:**
The architecture of IoT systems as presented can be complex due to the heterogeneous operating systems and hardware used in devices, gateways, edge devices, and data centers. IoT device manufacturers use a variety of proprietary hardware and software to develop new devices with advanced technology and functionality. This requires the use of different standards and protocols as well as parts sourced from multiple vendors. Performing investigations with standard forensics tools can be difficult as they may not support the various data formats or hardware. Specialized tools or a combination of network forensic and computer forensic tools and methods are required to extract data and analyze them in order to gather useful evidence. Complex reverse engineering techniques may be required to extract data stored in specific, proprietary formats.

Ritish Kumar is presenting

1. **Privacy concerns:** The retrieval and storage of the data can become challenging due to the global distribution of data and other factors, such as privacy and jurisdiction, can further complicate matters. Investigators may need to seek legal authorization or warrants from other governments as well as permissions from users to access data from sources where data are stored in the cloud. Clear policies and methodologies need to be implemented followed when handling evidence that may contain personal and sensitive information belonging to witnesses and other data sources that may be relevant to the investigation.
2. **Chain of custody and data integrity:** For acquired evidence to be accepted as legitimate and admissible in a court of law, it is mandatory to prove the chain of custody and data integrity. This becomes challenging in IoT forensics as data are moved from devices to the cloud due to inherent storage limitations. The courts require the chronological history of the evidence and proof that it has not been changed or tampered with in any way throughout the entire process. Forensic investigators need to be able to prove the chain of customer and integrity of data through their analysis and presentation to convince the courts to accept the evidence.

Roadmap for developing the AI and Analytics Strategy

- 01 Understand your starting position**
Understand the consumer expectations and then review your current maturity and identify areas for improvement
- 02 Find a Champion**
Identify the right leader to sponsor innovation and change. Your COO, CFO, and CDO can help minimize internal resistance and define your new organization as you start to implement changes.
- 03 Define your strategy**
Determine your target maturity level and the vision that best supports your business strategy
- 04 Develop the appropriate road map**
Settle on the necessary implementation steps and work them into a detailed road map
- 05 Deploy small pilots**
These "lighthouse" projects should aim at testing the end-to-end flow for a specific function, rather than implementing a limited set of technologies on a broader scale.
- 06 Segmented rollout and capability development**
After a successful pilot, the rollout should start with those business areas where expected benefit is highest.

How Blockchain Works ?

22

- A and B wish to conduct an 'interaction' or 'transaction'.
- Cryptographic keys are assigned to the interaction that both A and B hold.
- The interaction is broadcast as verified by a distribution network.
- Once validated, a new block is created.
- This block is added to the chain, creating a permanent 'golden source' of interaction.
- The transaction between A and B is completed.

3:06 PM | Meeting details

Dr. Sangita Chaudhari is presenting

Where to use blockchain ?

30

- Are there multiple parties in this ecosystem?
 - Blockchains get more secure with more parties in the network. One participant networks are not especially secure.
- Is establishing trust between all the parties an issue?
 - Blockchains improve trust between participants by having multiple points of verification
- Is it critical to have a tamper-proof permanent record of transactions?
 - Blockchains create permanent records that cannot be edited or deleted.
- Are we securing the ownership or management of a finite resource?
 - Core logic in the system is designed to prevent double counting of assets and record ownership and transfers.
- Does this ecosystem benefit from improved transparency?
 - Blockchains are transparent by design – where ownership or control of assets is public and transparent by design.
